

Personal Expense Tracker MCP

Five safe tools. One local CSV.

Expense records should be simple and safe

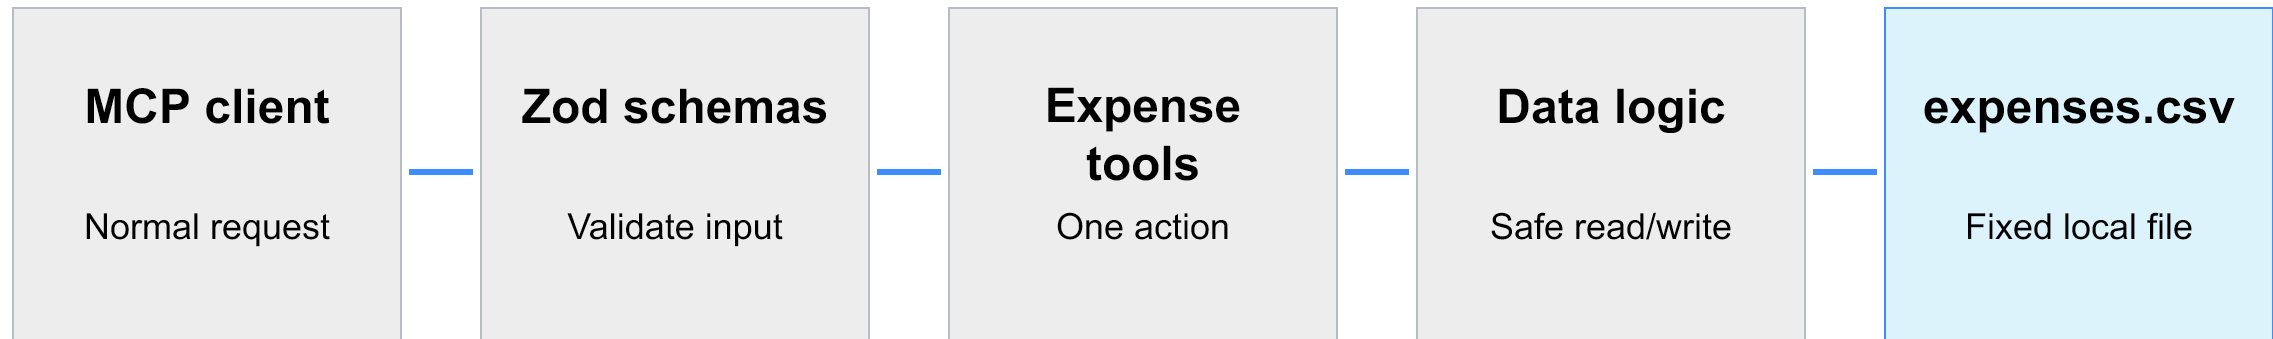

The problem

- Notes are easy to lose
- Totals take manual work
- A powerful assistant can do too much

The answer

- Five focused MCP tools
- Strict checks before each action
- One fixed local expense file

Every request follows one safe path

Fixed path | validated rows | queued writes | short safe errors

Five tools cover the full expense flow

The permissions stay small even when client input is strange or repeated.

Tool	Main job	Permission
add_expense	Save one validated expense	Write one
list_expenses	Return a bounded filtered list	Read only
get_spending_summary	Calculate totals by category	Read only
update_expense	Change one matching ID	Modify one
delete_expense	Remove one matching ID	Delete one

NEXT STEPS

Keep the safe local core

Encrypted backup, only when chosen
Clear spending charts
Safe CSV import preview
